

Applied Linguistics: Language, Corpora, and Technology

Authors : M Imran

Abstract : This research explores the intersections of applied linguistics, corpus linguistics, translation, and technology, aiming to present innovative cross-disciplinary tools and frameworks. It highlights significant contributions to language, corpora, and technology within applied linguistics, which deepen our understanding of these domains and provide practical resources for scholars, educators, and translators. By showcasing these advancements, the study seeks to enhance collaboration and application in language-related fields. The significance of applied linguistics is emphasized by some of the research that has been emphasized, which presents pedagogical perspectives that could enhance instruction and the learning results of student's at all academic levels as well as translation trainees. Researchers provided useful data from language studies with classroom applications from an instructional standpoint.

Keywords : linguistics, language, corpora, technology

Conference Title : ICLLL 2025 : International Conference on Languages, Literature and Linguistics

Conference Location : Toronto, Canada

Conference Dates : February 10-11, 2025
