

## Pharmacy Practice Research's Future

**Authors :** Ragy Raafat Gaber Attaalla

**Abstract :** Background: The research begins with a summary of the state of pharmacy practice research, both now and in the future. The concerns that are relevant to practice research are then covered in this research to set the stage. These concerns include shifts in the demography of the population, technological advancements, the institutional function of pharmacies, consumer behavior, and the pharmacy profession itself. It also describes the significant changes in pharmacy practice research, such as interprofessional collaboration and patient teaming, the description and measurement of intervention results, and the cultural diversity of patients. Methods: It would be most frequently employed in the next pharmacy practice research are highlighted in the conclusion. They cover the cultural diversity of patients, documenting and assessing the results of interventions, and interdisciplinary communication and partnership with patients. Results: The rise of large and complicated data sets, the handling of electronic health records, and the use of a wide range of mixed techniques by pharmacy practice researchers are a few potential future methodological obstacles.
