Integrating AI, Art, and History in Language Learning and Culture

Authors : May George

Abstract : Language learning requires experimenting with new methods to cope with the fast-emerging technological developments. AI tools have been used in teaching to enhance students' learning of language skills. This study explores the use of different technological tools to integrate different fields like art, math, history in language learning and culture. There is a lack of research on how to use AI tools effectively in classroom to enhance students' language skills. Therefore, AI is used in this to examine new ways of learning language skills focusing on historical contexts and art. The main goals are to assist language learners and motivate them to comprehend language skills in a creative way through summarizing certain contexts and linking this experience to real world situation. In the end, the students are able to understand and remember the context they studied and make progress in language learning.
