

Humor- A Systematic Review To Understand the Effect of Humor in Artificial Intelligence, Medicine, Workplace, Culture, Coping and Education

Authors : Tannu Taluja, Kanchan Yadav

Abstract : Humor is a global language of general emotions that everyone knows. Humor has a vast range of dimensions, functions, and styles. The current paper explained humor and also reviewed how it is used in artificial intelligence. It aimed how health professionals and teachers can use humor to ameliorate well-being and education and how humor differs among various culture. If used successfully, humor can boost relationships and productivity. The paper aimed to review how one can use humor as a pain reliever, in learning, in writing journals, improving quality of life. It also discussed about the findings about the purpose and impact of humor usage, the results of humor use on individual and leaders organisational leadership, and the important factors where humor can be identified and synthesised. Data was obtained from the PubMed, Frontier, PsycNet, Elsevier, Science Direct and other internet sources like Google Scholar. From 981 articles, irrelevant or inaccessible studies were eliminated, reducing the number of final articles chosen for review to 19. The current analysis not only compiles data from more than four decades of research, but it also makes various recommendations for future research on humor in artificial intelligence, medicine, workplace, culture, coping and education.

Keywords : artificial intelligence, culture, coping, education, humor, medicine, workplace
