

The microbial evaluation of cow raw milk used in private dairy factories in of Zawia city, Libya

Authors : Obied A. Alwan, Elgerbi, M. Ali

Abstract : This study was conducted on the cow milk which is used in the local milk factories of Zawia. This was completely random sampling the unscheduled samples. The microbiologic result have approved that the count of bacteria and the count of E.Coli are very high and all the manufacturing places which were included in the study have lacked the health conditions.

Keywords : raw milk, dairy factories, Libya, microbiologic
