Magnetic and Optical Properties of Quaternary GaFeMnN

Authors: B. Bouadjemi, S. Bentata, A. Abbad, W.Benstaali

Abstract : The full-potential linearized augmented plane wave method (FP-LAPW) within the Generalized Gradient Approximation (GGA) is used to calculate the magnetic and optical properties of quaternary GaFeMnN. The results show that the compound becomes magnetic and half metallic and there is an apparition of peaks at low frequencies for the optical properties.

Keywords: optical properties, DFT, Spintronic, wave

Conference Title: ICMNSS 2014: International Conference on MEMS, Nano and Smart Systems

Conference Location : Istanbul, Türkiye **Conference Dates :** November 28-29, 2014
