

Computer Server Virtualization

Authors : Pradeep M. C. Chand

Abstract : Virtual infrastructure initiatives often spring from data center server consolidation projects, which focus on reducing existing infrastructure “box count”, retiring older hardware or life-extending legacy applications. Server consolidation benefits result from a reduction in the overall number of systems and related recurring costs (power, cooling, rack space, etc.) and also helps in the reduction of heat to the environment.

Keywords : server virtualization, data center, consolidation, project

Conference Title : ICCCISE 2015 : International Conference on Computer, Communication, Information Science, Engineering

Conference Location : Kuala Lumpur, Malaysia

Conference Dates : February 12-13, 2015
