

An Optimal Perspective on Research in Translation Studies

Authors : Andrea Musumeci

Abstract : General theory of translation has suffered the lack of a homogeneous academic dialect, a holistic methodology to account for the diversity of factors involved in the discipline. An underlying pattern amongst theories of translation belonging to different periods and schools has been identified. Such pattern, which is linguistics oriented, could play a role towards unified academic and professional environments, both in terms of research and as a professional category. The implementation of such an approach has also led to a critique of the concept of equivalence, as being not the best of ways to account for translating phenomena.

Keywords : optimal, translating, research translation theory, methodology, descriptive analysis

Conference Title : ICT 2015 : International Conference on Translation

Conference Location : London, United Kingdom

Conference Dates : October 23-24, 2015
