The Faithful Extension of Constant Height and Constant Width Between Finite Posets

Authors : Walied Hazim Sharif

Abstract : The problem of faithful extension with the condition of keeping constant height h and constant width w, i.e. for h w - inextensibility, seems more interesting than the brute extension of finite poset (partially ordered set). We shall investigate some theorems of hw-inextensive and hw-exrensive posets that can be used to formulate the faithful extension problem. A theorem in its general form of hw-inextensive posets is given to implement the presented theorems.
