

Performance Analysis of Scalable Secure Multicasting in Social Networking

Authors : R. Venkatesan, A. Sabari

Abstract : Developments of social networking internet scenario are recommended for the requirements of scalable, authentic, secure group communication model like multicasting. Multicasting is an inter network service that offers efficient delivery of data from a source to multiple destinations. Even though multicast has been very successful at providing an efficient and best-effort data delivery service for huge groups, it verified complex process to expand other features to multicast in a scalable way. Separately, the requirement for secure electronic information had become gradually more apparent. Since multicast applications are deployed for mainstream purpose the need to secure multicast communications will become significant.

Keywords : multicasting, scalability, security, social network

Conference Title : ICCIS 2015 : International Conference on Computer and Information Systems

Conference Location : London, United Kingdom

Conference Dates : January 19-20, 2015
