

Fabrication and Characterization of Transdermal Spray Using Film Forming Polymer

Authors : Paresh Patel, Harshit Patel

Abstract : Superficial fungal skin infection is among the most common skin disease. The drug administration through skin has received attention due to several advantages: Avoidance of significant pre-systemic metabolism, drug levels within the therapeutic window, drugs with short biological half-lives, decreased side effects, the non-invasive character, and very high acceptance.

Keywords : transdermal spray, ketoconazole, Eudragit® RLPO, therapeutic window

Conference Title : ICBN 2014 : International Conference on Biotechnology and Nanotechnology

Conference Location : Melbourne, Australia

Conference Dates : December 16-17, 2014
