

Finite Element Analysis of Debonding Propagation in FM73 Joint under Static Loading

Authors : Reza Hedayati, Meysam Jahanbakhshi

Abstract : In this work, Fracture Mechanics is used to predict crack propagation in the adhesive joining aluminum and composite plates. Three types of loadings and two types of glass-epoxy composite sequences: [0/90]_{2s} and [0/45/-45/90]_s are considered for the composite plate. Therefore, 2*3=6 cases are considered and their results are compared. The debonding initiation load, complete debonding load, crack face profile and load-displacement diagram have been compared for the six cases.
