Fin Efficiency of Helical Fin with Fixed Fin Tip Temperature Boundary Condition

Authors : Richard G. Carranza, Juan Ospina

Abstract : The fin efficiency for a helical fin with a fixed fin tip (or arbitrary) temperature boundary condition is presented. Firstly, the temperature profile throughout the fin is determined via an energy balance around the fin itself. Secondly, the fin efficiency is formulated by integrating across the entire surface of the helical fin. An analytical expression for the fin efficiency is presented and compared with the literature for accuracy.

Keywords : efficiency, fin, heat, helical, transfer

Conference Title : ICFTE 2015 : International Conference on Fluids and Thermal Engineering **Conference Location :** Rome, Italy

Conference Dates : September 17-18, 2015
