

## Technological Developments in Logistics and its Applications in the Army

**Authors :** Gökhan Balci

**Abstract :** “Armies march on their stomachs” mentioned Napoleon, who drew attention to the importance of logistics for the armies...In today’s World, in which continental trade gained importance, the crucial role of logistics became conspicuous since it was accepted by the business World that an effective logistics system is the key factor for success. Depending of the new developments in technology and techniques of logistics, the modern military institutions increase their effectiveness. The modern national armies or allied forces which operate in overseas, realize the importance of logistics as well. This study will focus on the applications of logistics in civilian business sector and modern armies, which may shed light on logistical problems of the other armies.

**Keywords :** modern logistics, application in armies, new technology in logistics, new developments in technology
