

Study of the Adsorption of Metal Ions Ag^+ Mg^{2+} , Ni^{2+} by the Chemical and Electrochemical Polydibenzoether Crown

Authors : Dalila Chouder, Djaafer Benachour

Abstract : This work concerns the study of the adsorption of metal ions Ag^+ , Mg^{2+} , and Ni^{2+} in aqueous medium by polydibenzoether-ROWN based on three factors: Temperature, time and concentration. The polydibenzoether crown was synthesized by two means: Chemical and electrochemical. The behavior of the two polymers has been different, and turns out very interesting for chemical polydibenzoether crown has identified conditions. Chemical and électronique polydibenzoether crown have different extraction screw vi property of adsoption of ions fifférents, this study also shows that plyméres doped may have an advantageous electrical conductivity.

Keywords : polymerization, electrochemical, conductivity, complexing metal ions

Conference Title : ICSRD 2020 : International Conference on Scientific Research and Development

Conference Location : Chicago, United States

Conference Dates : December 12-13, 2020
