

Pollution-Sources, Controls, and Impact Analysis

Authors : Aditi Acharya

Abstract : Environmental pollution is threatening the environmental and human health in the most drastic way. This paper provides insight about the affects of environmental pollution in the perspective of water pollution. Sewage in drinking water, the increasing contamination of water bodies and water resources and the human beings are the major contributors, increasing the harsh activities of pollution. The research presents information about the sources of pollution, its impacts and control activities to be undertaken to make our environment free from water pollution.

Keywords : environmental pollution, water pollution, nanotechnology, nanomaterials

Conference Title : ICWPC 2015 : International Conference on Water Pollution and Control

Conference Location : Paris, France

Conference Dates : February 23-24, 2015
