

Design of the Ubiquitous Cloud Learning Management System

Authors : Panita Wannapiroon, Noppadon Phumeechanya, Sitthichai Laisema

Abstract : This study is the research and development which is intended to: 1) design the ubiquitous cloud learning management system and: 2) assess the suitability of the design of the ubiquitous cloud learning management system. Its methods are divided into 2 phases. Phase 1 is the design of the ubiquitous cloud learning management system, phase 2 is the assessment of the suitability of the design the samples used in this study are work done by 25 professionals in the field of Ubiquitous cloud learning management systems and information and communication technology in education selected using the purposive sampling method. Data analyzed by arithmetic mean and standard deviation. The results showed that the ubiquitous cloud learning management system consists of 2 main components which are: 1) the ubiquitous cloud learning management system server (u-Cloud LMS Server) including: cloud repository, cloud information resources, social cloud network, cloud context awareness, cloud communication, cloud collaborative tools, and: 2) the mobile client. The result of the system suitability assessment from the professionals is in the highest range.

Keywords : learning management system, cloud computing, ubiquitous learning, ubiquitous learning management system

Conference Title : ICTES 2015 : International Conference on Teaching and Education Sciences

Conference Location : Kyoto, Japan

Conference Dates : November 12-13, 2015
