

A Survey on Internet of Things and Fog Computing as a Platform for Internet of Things

Authors : Samira Kalantary, Sara Taghipour, Mansoure Ghias Abadi

Abstract : The Internet of Things (IOT) is a technological revolution that represents the future of computing and communications. IOT is the convergence of Internet with RFID, NFC, Sensor, and smart objects. Fog Computing is the natural platform for IOT. At present, the IOT as a new network communication technology has rapidly shifted from concept to application under fog computing virtual storage computing platform. In this paper, we describe everything about IOT and difference between cloud computing and fog computing.

Keywords : cloud computing, fog computing, Internet of Things (IoT), IOT application

Conference Title : ICPDSSE 2015 : International Conference on Parallel, Distributed Systems and Software Engineering

Conference Location : Singapore, Singapore

Conference Dates : July 04-05, 2015
