

Comparison of Competitive State Anxiety among Elite and Non-Elite Futsal Players and Its Relationship with Situational Factors

Authors : Hassan Habibi, Hossein Soltani, Amir Moghadam, Najmeh Bakhshi

Abstract : The purpose of this study was to compare competitive state anxiety among elite and non-elite futsal players and its relationship with situational factors. 130 non-elite and 70 elite male futsal players participated in the study. Competitive State Anxiety Inventory-2 and situational factors Inventory were applied. Data was analyzed using one-way ANOVA and product moment correlation. Results showed there was significant difference between competitive state anxiety subscales (cognitive anxiety somatic anxiety & self-confidence) and situational factors among elite and non-elite futsal players ($P < 0.05$) but there was no significant correlations between situational factors subscales among elite and non-elite futsal players ($P < 0.05$).

Keywords : competitive state anxiety, situational factors, elite players, non-elite players
