

## The Soliton Solution of the Quadratic-Cubic Nonlinear Schrodinger Equation

**Authors :** Sarun Phibanchon, Yuttakarn Rattanachai

**Abstract :** The quadratic-cubic nonlinear Schrodinger equation can be explained the weakly ion-acoustic waves in magnetized plasma with a slightly non-Maxwellian electron distribution by using the Madelung's fluid picture. However, the soliton solution to the quadratic-cubic nonlinear Schrodinger equation is determined by using the direct integration. By the characteristics of a soliton, the solution can be claimed that it's a soliton by considering its time evolution and their collisions between two solutions. These results are shown by applying the spectral method.
