

Critical Success Factors for Implementation of E-Supply Chain Management

Authors : Mehrnoosh Askarizadeh

Abstract : Globalization of the economy, e-business, and introduction of new technologies pose new challenges to all organizations. In recent decades, globalization, outsourcing, and information technology have enabled many organizations to successfully operate collaborative supply networks in which each specialized business partner focuses on only a few key strategic activities. For these industries, supply network can be acknowledged as a new form of organization. We will study about critical success factors (CSFs) for implementation of SCM in companies. It is shown that in different circumstances e-supply chain management has a higher impact on performance.

Keywords : supply chain management, logistics management, critical success factors, information technology, top management support, human resource
