

Modeling Revolution Shell Structures by MATLAB Programming- Axisymmetric and Nonaxisymmetric Shells

Authors : Hamadi Djamel, Labiodh Bachir, Ounis Abdelhafid, Chaalane Mourad

Abstract : The objective of this work is setting numerically operational finite element CAXI_L for the axisymmetric and nonaxisymmetric shells. This element is based on the Reissner-Mindlin theory and mixed model formulation. The MATLAB language is used for the programming. In order to test the elaborated program, some applications are carried out.

Keywords : axisymmetric shells, nonaxisymmetric behaviour, finite element, MATLAB programming

Conference Title : ICAMEM 2014 : International Conference on Applied Mathematics and Engineering Mathematics

Conference Location : Istanbul, Turkey

Conference Dates : June 19-20, 2014
