

ECO ROADS: A Solution to the Vehicular Pollution on Roads

Authors : Harshit Garg, Shakshi Gupta

Abstract : One of the major problems in today's world is the growing pollution. The cause for all environmental problems is the increasing pollution rate. Looking upon the statistics, one can find out that most of the pollution is caused by the vehicular pollution which is more than 70 % of the total pollution, effecting the environment as well as human health proportionally. One is aware of the fact that vehicles run on roads so why not having the roads which could adsorb that pollution, not only once but a number of times. Every problem has a solution which can be solved by the state of art of technology, that is one can use the innovative ideas and thoughts to make technology as a solution to the problem of vehicular pollution on roads. Solving the problem up to a certain limit/ percentage can be formulated into a new term called ECO ROADS.

Keywords : environment, pollution, roads, sustainability

Conference Title : ICEESD 2016 : International Conference on Energy, Environment and Sustainable Development

Conference Location : Paris, France

Conference Dates : January 21-22, 2016
