Approximation of a Wanted Flow via Topological Sensitivity Analysis

Authors : Mohamed Abdelwahed

Abstract : We propose an optimization algorithm for the geometric control of fluid flow. The used approach is based on the topological sensitivity analysis method. It consists in studying the variation of a cost function with respect to the insertion of a small obstacle in the domain. Some theoretical and numerical results are presented in 2D and 3D.

Keywords : sensitivity analysis, topological gradient, shape optimization, stokes equations

Conference Title : ICMCSSE 2014 : International Conference on Mathematical, Computational and Statistical Sciences and Engineering

Conference Location : Madrid, Spain

Conference Dates : March 27-28, 2014
