Abstract : CuO thin films were deposited by spray ultrasonic pyrolysis with different precursor solution. Two staring solution slats were used namely: Copper acetate and copper chloride. The influence of these solutions on CuO thin films proprieties of is instigated. The X rays diffraction (XDR) analysis indicated that the films deposed with copper acetate are amorphous however the films elaborated with copper chloride have monoclinic structure. UV- Visible transmission spectra showed a strong absorbance of the deposited CuO thin films in the visible region. Electrical characterization has shown that CuO thin films prepared with copper acetate have a higher electrical conductivity.

Keywords : thin films, cuprous oxide, spray pyrolysis, precursor solution

Conference Title : ICMME 2015 : International Conference on Mechanical and Materials Engineering

Conference Location : Paris, France

Conference Dates : October 29-30, 2015
