

Study of Human Position in Architecture with Contextual Approach

Authors : E. Zarei, M. Bazaei, A. seifi, A. Keshavarzi

Abstract : Contextuallism has been always the main component of urban science. It not only has great direct and indirect impact on behaviors, events and interactions, but also is one of the basic factors of an urban values and identity. Nowadays there might be some deficiencies in the cities. In the theories of environment designing, humanistic orientations with the focus on culture and cultural variables would enable us to transfer information. To communicate with the context in which human lives, he needs some common memories, understandable symbols and daily activities in that context. The configuration of a place can impact on human's behaviors. The goal of this research is to review 7 projects in different parts of the world with various usages and some factors such as 'sense of place', 'sense of belonging' and 'social and cultural relations' will be discussed in these projects. The method used for research in this project is descriptive- analytic. Library information and Internet are the main sources of gathering information and the method of reasoning used in this project is inductive. The consequence of this research will be some data in the form of tables that has been extracted from mentioned projects.

Keywords : contextuallism with humanistic approach, sense of place, sense of belonging, social and cultural relations

Conference Title : ICSAUD 2015 : International Conference on Sustainable Architecture and Urban Design

Conference Location : Chicago, United States

Conference Dates : October 08-09, 2015
