

The Study of the Awareness of Sexual Risk Behaviors and Sexual Risk Behaviors of Adolescents Students

Authors : Sumitta Sawangtook, Parichart Thanoo

Abstract : The purposes of research were to study the relationship between the awareness of sexual risk behaviors and sexual risk behaviors of adolescent students, and to compare the sexual risk behaviors of adolescent students by gender, education level, sweetheart's number, achievement, sexual value, and the influence of the friendship group. The research sample of 344 seventh through twelfth grade students in secondary school for the academic year 2014, Dindang district Bangkok was selected by simple random sampling. The research instruments are: 1) demographic questionnaire 2) evaluation form of the awareness of sexual risk behaviors 3) questionnaire about sexual value 4) questionnaire about the influence of the friendship group and 5) evaluation form of sexual risk behaviors. They were used for data collections which are subsequently analyzed by percentage, mean, standard deviation, t-test, One-way Analysis of Variances. The results of this study were presented as follow: 1) The awareness of sexual risk behaviors was negatively correlated with sexual risk behaviors of adolescent students ($r = -.27$, $p = .000$). 2) There was significant difference at .05 level in sexual risk behaviors among adolescent students who had gender difference ($t = 5.90$, $p = .000$). 3) There was no significant difference at .05 level in sexual risk behaviors among adolescent students who had the different level of education ($t = 1.41$, $p = .16$). 4) There was significant difference at .05 level in sexual risk behaviors among adolescent students who had the different level of sweetheart's number ($F = 13.03$, $p = .000$). 5) There was significant difference at .05 level in sexual risk behaviors among adolescent students who had the different level of achievement ($F = 4.77$, $p = .009$). 6) There were significant difference at .05 level in sexual risk behaviors among adolescent students who had different level of sexual value ($F = 50.91$, $p = .000$) 7) There were significant difference at .05 level in sexual risk behaviors among adolescent students who had different level of the influence of the friendship group ($F = 98.41$, $p = .000$).

Keywords : the awareness of sexual risk behaviors, sexual risk behaviors, adolescent students
