

A Retrospective Study on Causes, Surgery Findings, Results and Follow up of 30 Horses with Colic in Tehran, Iran

Authors : Farajallah Adibhashemi

Abstract : A retrospective study on causes, surgery findings, results and the follow up of 30 horses with colic in Tehran, Iran. Colic is the main problem horse industry. The causes of colic are related to management like food, sport and medical care. In this study that has been done between 2012-2015 for 30 horses referred to teaching hospital of veterinary medicine faculty of the University of Tehran. Seventy percent of causes was related to management of feeding and twenty percent was for malsporting. The rest of causes was from the anti parasite in bad root. The surgery findings were as follows: 60% displacement of dorsal right and left colon, 20% in impaction of pelvic flexure, 10% impaction of the cecum, and 10% impaction of the stomach.
