

The Application of Morphological Principles in Compilation of Solutions for Urban-Rural Problems, Case Study: Baghshater Neighborhood, Locating in Tehran, Iran Region1

Authors : Sepideh Jabbari Behnam, Elnaz Mohsenin

Abstract : Today, with the rapid growth of urbanization, urban issues are so problematic more than ever. These problems have various origins and they should be studied in different aspects. One of these problems is destroying the structure and identity of urban-rural textures around cities. This destruction appears due to an uncontrolled and unplanned growth of large cities inside and/or connecting suburban areas to the cities. These textures which were called urban-rural areas are faced with the dual identity of rural and urban tissues. It should be noted that, urban-rural areas have the potential for creating urban habitats with the rural nature. However; these areas, due to lack of planning and proper management have encountered serious problems. The main objective of this article is offering some solutions for the structural-physical problems of urban-rural areas with the using of morphological principles and studies. In this case, after morphological studies of one of urban-rural texture example, and also with the use of offered research literature, general solutions have been suggested to solve some of these textures' issues.

Keywords : morphology, typo- morphology, urban-rural, urban texture

Conference Title : ICURS 2015 : International Conference on Urban and Regional Studies

Conference Location : Istanbul, Türkiye

Conference Dates : December 21-22, 2015
