

Evaluation of the Effect of IMS on the Social Responsibility in the Oil and Gas Production Companies of National Iranian South Oil Fields Company (NISOC)

Authors : Kamran Taghizadeh

Abstract : This study was aimed at evaluating the effect of IMS including occupational health system, environmental management system, and safety and health system on the social responsibility (case study of NISOC's oil and gas production companies). This study's objectives include evaluating the IMS situation and its effect on social responsibility in addition of providing appropriate solutions based on the study's hypotheses as a basis for future. Data collection was carried out by library and field studies as well as a questionnaire. The stratified random method was the sampling method and a sample of 285 employees in addition to the collected data (from the questionnaire) were analyzed by inferential statistics methods using SPSS software. Finally, results of regression and fitted model at a significance level of 5% confirmed all hypotheses meaning that IMS and its items have a significant effect on social responsibility.

Keywords : social responsibility, integrated management, oil and gas production companies, regression
