

Influence of Thermal Radiation on MHD Micropolar Fluid Flow, Heat and Mass Transfer over Vertical Flat Plate

Authors : Alouaoui Redha, Ferhat Samira, Bouaziz Mohamed Najib

Abstract : In this work, we examine the thermal radiation effect on heat and mass transfer in steady laminar boundary layer flow of an incompressible viscous micropolar fluid over a vertical plate, with the presence of a magnetic field. Rosseland approximation is applied to describe the radiative heat flux in the energy equation. The resulting similarity equations are solved numerically. Many results are obtained and representative set is displayed graphically to illustrate the influence of the various parameters on different profiles. The conclusion is drawn that the flow field, temperature, concentration and microrotation as well as the skin friction coefficient and the both local Nusselt and local Sherwood numbers are significantly influenced by Magnetic parameter, material parameter and thermal radiation parameter.

Keywords : MHD, micropolar fluid, thermal radiation, heat and mass transfer, boundary layer

Conference Title : ICPET 2016 : International Conference on Power Engineering and Technology

Conference Location : Paris, France

Conference Dates : March 14-15, 2016
