Investigation of Delivery of Triple Play Service in GE-PON Fiber to the Home Network

Authors : Anurag Sharma, Dinesh Kumar, Rahul Malhotra, Manoj Kumar

Abstract : Fiber based access networks can deliver performance that can support the increasing demands for high speed connections. One of the new technologies that have emerged in recent years is Passive Optical Networks. This paper is targeted to show the simultaneous delivery of triple play service (data, voice and video). The comparative investigation and suitability of various data rates is presented. It is demonstrated that as we increase the data rate, number of users to be accommodated decreases due to increase in bit error rate.
