

Beliefs on Reproduction of Women in Fish Port Community: An Explorative Study on the Beliefs on Conception, Childbirth, and Maternal Care of Women in Navotas Fish Port Community

Authors : Marie Kristel A. Gabawa

Abstract : The accessibility of health programs, specifically family planning programs and maternal and child health care (FP/MCH), are generally low in urban poor communities. Moreover, most of FP/MCH programs are directed toward medical terms that are usually not included in ideation of the body of urban poor dwellers. This study aims to explore the beliefs on reproduction that will encompass, but not limited to, beliefs on conception, pregnancy, and maternal and child health care. The site of study will be the 2 barangays of North Bay Boulevard South 1 (NBBS1) and North Bay Boulevard South 2 (NBBS2). These 2 barangays are the nearest residential community within the Navotas Fish Port Complex (NFPC). Data gathered will be analyzed using grounded-theory method of analysis, with the theories of cultural materialism and equity feminism as foundation. Survey questionnaires, key informant interviews, and focus group discussions will be utilized in gathering data. Further, the presentation of data will be recommended to health program initiators and use the data gathered as a tool to customize FP/MCH programs to the perception and beliefs of women residing in NBBS1 and NBBS2, and to aid any misinformation for FP/MCH techniques.

Keywords : beliefs on reproduction, fish port community, family planning, maternal and child health care, Navotas
