## A Low-Voltage Synchronous Command for JFET Rectifiers

Authors: P. Monginaud, J. C. Baudey

**Abstract :** The synchronous, low-voltage command for JFET Rectifiers has many applications: indeed, replacing the traditional diodes by these components allows enhanced performances in gain, linearity and phase shift. We introduce here a new bridge, including JEET associated with pull days bipolar command evertone, and double purpose logic gates.

including JFET associated with pull-down, bipolar command systems, and double-purpose logic gates.
