## **Comparison of Frequency-Domain Contention Schemes in Wireless LANs**

Authors: Li Feng

**Abstract :** In IEEE 802.11 networks, it is well known that the traditional time-domain contention often leads to low channel utilization. The first frequency-domain contention scheme, the time to frequency (T2F), has recently been proposed to improve the channel utilization and has attracted a great deal of attention. In this paper, we survey the latest research progress on the weighed frequency-domain contention. We present the basic ideas, work principles of these related schemes and point out their differences. This paper is very useful for further study on frequency-domain contention.

Keywords: 802.11, wireless LANs, frequency-domain contention, T2F

Conference Title: ICCCN 2016: International Conference on Communications and Computer Networks

Conference Location: Singapore, Singapore Conference Dates: January 07-08, 2016
