## **Generating Arabic Fonts Using Rational Cubic Ball Functions**

Authors: Fakharuddin Ibrahim, Jamaludin Md. Ali, Ahmad Ramli

**Abstract :** In this paper, we will discuss about the data interpolation by using the rational cubic Ball curve. To generate a curve with a better and satisfactory smoothness, the curve segments must be connected with a certain amount of continuity. The continuity that we will consider is of type  $G<\sup>1</\sup>$  continuity. The conditions considered are known as the  $G<\sup>1</\sup>$  Hermite condition. A simple application of the proposed method is to generate an Arabic font satisfying the required continuity.

Keywords: data interpolation, rational ball curve, hermite condition, continuity
