## Analysis of a Strengthening of a Building Reinforced Concrete Structure

Authors: Nassereddine Attari

**Abstract :** Each operation to strengthen or repair requires special consideration and requires the use of methods, tools and techniques appropriate to the situation and specific problems of each of the constructs. The aim of this paper is to study the pathology of building of reinforced concrete towards the earthquake and the vulnerability assessment using a non-linear Pushover analysis and to develop curves for a medium capacity building in order to estimate the damaged condition of the building

Keywords: pushover analysis, earthquake, damage, strengthening

Conference Title: ICCSGE 2016: International Conference on Concrete, Structural and Geotechnical Engineering

Conference Location: Istanbul, Türkiye Conference Dates: January 25-26, 2016
