

Managers' Mobile Information Behavior in an Openness Paradigm Era

Authors : Abd Latif Abdul Rahman, Zuraidah Arif, Muhammad Faizal Iyia, Mohd Ghazali, Asmadi Mohammed Ghazali

Abstract : Mobile information is a significant access point for human information activities. Theories and models of human information behavior have developed over several decades but have not yet considered the role of the user's computing device in digital information interactions. This paper reviews the literature that leads to developing a conceptual framework of a study on the managers mobile information behavior. Based on the literature review, dimensions of mobile information behavior are identified, namely, dimension information needs, dimension information access, information retrieval and dimension of information use. The study is significant to understand the nature of librarians' behavior in searching, retrieving and using information via the mobile device. Secondly, the study would provide suggestions about various kinds of mobile applications which organization can provide for their staff to improve their services.

Keywords : mobile information behavior, information behavior, mobile information, mobile devices
