

Good Environmental Governance Realization among the Three King Mongkut's Institutes of Technology in Bangkok, Thailand

Authors : Pastraporn Thipayasothorn, Vipawan Tadapratheep, Jintana Nokyo

Abstract : A physical realization of good environmental governance about an environmental principle, educational psychology and architecture in the three King Mongkut's Institutes of Technology, is generated for researching physical environmental factors which related to the good environmental governance, communication between the good environmental governance and a physical environmental, and a physical environmental design policy. Moreover, we collected data by a survey, observation and questionnaire that participants are students of the three King Mongkut's Institutes of Technology, and analyzed a relationship between a building utilization and the good environmental governance awareness. We found that, from the data analysis, a balance and creativity participation which played as the project users and communities of the good governance environmental promotion in the institutes helps the good governance and environmental development in the future.

Keywords : built environment, good governance, environmental governance, physical environmental
