Central African Republic Government Recruitment Agency Based on Identity Management and Public Key Encryption

Authors : Koyangbo Guere Monguia Michel Alex Emmanuel

Abstract : In e-government and especially recruitment, many researches have been conducted to build a trustworthy and reliable online or application system capable to process users or job applicant files. In this research (Government Recruitment Agency), cloud computing, identity management and public key encryption have been used to management domains, access control authorization mechanism and to secure data exchange between entities for reliable procedure of processing files.
