

## Towards Development of a Framework for Saudi Education Software Ecosystem

**Authors :** Fazal-e-Amin, Abdullah S. Alghamdi, Iftikhar Ahmad

**Abstract :** Software ecosystems' concept is an inspiration from the natural ecosystem. Software ecosystems refer to large systems developed on top of a platform composed of different components developed by different entities of that ecosystem. Ecosystems improve information access, dissemination and coordination considerably. The ability to evolve and accommodate new subsystems gives a boost to the software ecosystems. In this paper, Saudi education software ecosystem is discussed and its need and potential benefits are highlighted. This work will provide a basis for further research in this area and foundation in development of Saudi education ecosystem.
