

Smart Trust Management for Vehicular Networks

Authors : Amel Ltifi, Ahmed Zouinkhi, Med Salim Bouhlel

Abstract : Spontaneous networks such as VANET are in general deployed in an open and thus easily accessible environment. Therefore, they are vulnerable to attacks. Trust management is one of a set of security solutions dedicated to this type of networks. Moreover, the strong mobility of the nodes (in the case of VANET) makes the establishment of a trust management system complex. In this paper, we present a concept of "Active Vehicle" which means an autonomous vehicle that is able to make decision about trustworthiness of alert messages transmitted about road accidents. The behavior of an "Active Vehicle" is modeled using Petri Nets.

Keywords : active vehicle, cooperation, petri nets, trust management, VANET

Conference Title : ICBCNS 2016 : International Conference on Broadband Communications, Networks, and Systems

Conference Location : Paris, France

Conference Dates : August 22-23, 2016
