

Planning Healthy, Livable, and Sustainable Community in Terms of Effective Indicators on Policy Maker

Authors : Reihaneh Rafiemanzelat, Maryam Baradaran

Abstract : Creating healthy communities that are sustainable and livable is a desire of policy makers in European countries. Indicators have used at the level of international, national, state to evaluate the level of health in cities and regions. Therefore, there are many challenges in the assumption of health and planning indicators. This research provides an overview of health indicators used to date in Europe according to World Health Organization (WHO) strategy. It then discusses on how indicators have been successful to the creation of healthy, livable and sustainable cities in Europe. This research is based on qualitative research to review the documentary researches on health issue and urban planning. The result will show the positive and negative effects of in process indicators on European cities.

Keywords : healthy community, livability, sustainability, WHO strategy
