Impacts of CuO, TiO2, SiO2 Nanoparticles on Biological Phosphorus Removal

Authors: H. Shiu, M.S. Lu, Y.P. Tsai

Abstract : This study explored the impacts of CuO, TiO2, SiO2 nanoparticles on biological phosphorus removal. Experimental results showed that the phosphorus removal ability of phosphorus accumulating organism (PAO) was initially inhibited when CuO nanoparticle concentration was 5 mgl-1. The inhibition of phosphorus removal for 1000 mgl-1 of TiO2 with sunlight was higher than without sunlight case. The inhibition of phosphorus removal began at 500 mgl-1 SiO2 nanoparticle concentration. Inhibition became apparent when SiO2 nanoparticle concentration was up to 1000 mgl-1.

Keywords: nano copper oxide, nano titanium dioxide, nano silica, enhanced biological phosphate removal **Conference Title:** ICSWRM 2014: International Conference on Sustainable Water Resources Management

Conference Location: Stockholm, Sweden Conference Dates: July 14-15, 2014
