

Environmental Liability of Architects: Architects Destroying the City in Designed and Creative Way, Dhaka City

Authors : Md. Ratin

Abstract : This paper aims to show how Dhaka city is getting destroyed and the creator and guide of the city - the architects destroying the city in more designed and creative way. The liability of architects should be first and foremost to make the world, country, city a better living environment. As without it where the architects will do their design? To make a better living environment architects should conserve the tress, river and other related ingredient related to the environment. This paper attempts to show how cutting down trees and filling rivers causing more problem than having a great architecture in those places. For increasing people in a city like Dhaka, we need more shelter. But for providing those architects building more living spaces. But as a liability of an architect, one should give something back to the environment too. With time the city's greenery and water body are getting vanished like magic. And for this, the architects should be blamed for giving us a disastrous future. The analysis is based on literature survey and survey by questionnaire, interviews of users.

Keywords : architect, environment, liability, river
