

Single-Element Simulations of Wood Material in LS-DYNA

Authors : Ren Zuo Wang

Abstract : In this paper, in order to investigate the behavior of the wood structure, the non-linearity of wood material model in LS-DYNA is adopted. It is difficult and less efficient to conduct the experiment of the ancient wood structure, hence LS-DYNA software can be used to simulate nonlinear responses of ancient wood structure. In LS-DYNA software, there is material model called *MAT_WOOD or *MAT_143. This model is to simulate a single-element response of the wood subjected to tension and compression under the parallel and the perpendicular material directions. Comparing with the exact solution and numerical simulations results using LS-DYNA, it demonstrates the accuracy and the efficiency of the proposed simulation method.

Keywords : LS-DYNA, wood structure, single-element simulations, MAT_143

Conference Title : ICAM 2017 : International Conference on Applied Mathematics

Conference Location : London, United Kingdom

Conference Dates : July 24-25, 2017
