Advanced Stability Criterion for Time-Delayed Systems of Neutral Type and Its Application

Authors : M. J. Park, S. H. Lee, C. H. Lee, O. M. Kwon

Abstract : This paper investigates stability problem for linear systems of neutral type with time-varying delay. By constructing various Lyapunov-Krasovskii functional, and utilizing some mathematical techniques, the sufficient stability conditions for the systems are established in terms of linear matrix inequalities (LMIs), which can be easily solved by various effective optimization algorithms. Finally, some illustrative examples are given to show the effectiveness of the proposed criterion. **Keywords :** neutral systems, time-delay, stability, Lyapnov method, LMI

Conference Title : ICSRD 2020 : International Conference on Scientific Research and Development

Conference Location : Chicago, United States

Conference Dates : December 12-13, 2020
