Displacement Due to Natural Disasters Vis-à-Vis Policy Framework: Case Study of Mising Community of Majuli, Assam

Authors: Mausumi Chetia

Abstract : One of the main causes of impoverishment of the rural areas of Assam has been the recurrent floods and riverbank erosion. One of the life-changing consequences is displacement. This results not only in a loss of livelihoods but also has wide-reaching socio-economic and cultural effects. Thus, due to such disasters, not only families but communities too are being displaced at large. This compels them to find temporary shelter and begin life from scratch. The role of the state has been highly negligible, with a displacement not being perceived as an 'issue' to be addressed. A more holistic approach is thus needed to take socio-economic, cultural, political as well as ecological considerations into account.

Keywords: displacement, policy-framework, human-induced disasters, marginalised communities, India, Assam

Conference Title: ICDPM 2017: International Conference on Disaster Prevention and Mitigation

Conference Location : Paris, France **Conference Dates :** May 18-19, 2017
