

Motion Planning and Posture Control of the General 3-Trailer System

Authors : K. Raghuwaiya, B. Sharma, J. Vanualailai

Abstract : This paper presents a set of artificial potential field functions that improves upon; in general, the motion planning and posture control, with theoretically guaranteed point and posture stabilities, convergence and collision avoidance properties of the general 3-trailer system in a priori known environment. We basically design and inject two new concepts; ghost walls and the distance optimization technique (DOT) to strengthen point and posture stabilities, in the sense of Lyapunov, of our dynamical model. This new combination of techniques emerges as a convenient mechanism for obtaining feasible orientations at the target positions with an overall reduction in the complexity of the navigation laws. Simulations are provided to demonstrate the effectiveness of the controls laws.

Keywords : artificial potential fields, 3-trailer systems, motion planning, posture

Conference Title : ICAMMS 2014 : International Conference on Applied Mathematics, Modelling and Simulation

Conference Location : Singapore, Singapore

Conference Dates : March 30-31, 2014
