

A Phenomenological Framework of Unconscious Cognition on Judicial Decision Making

Authors : Mariam Shah

Abstract : This paper will examine the potential influence and role of unconscious cognition on judicial decision making. The theoretical underpinnings of this paper rest on phenomenological theory grounded predominantly in Schutzian phenomenology. Aspects of Husserlian and Gadamerian phenomenology will be included within the phenomenological framework put forward in this paper, in an attempt to provide a more complete and thorough account of how unconscious cognition can influence judicial decision making. This paper has far reaching implications, as the framework provides a foundation for unconscious cognitive factors which can work to influence decision making more generally.

Keywords : decision making, Gadamer, Gadamerian, Husserl, Husserlian, judicial decision making, phenomenology, Schutz, Schutzian

Conference Title : ICECSP 2018 : International Conference on Enactive Cognitive Science and Phenomenology

Conference Location : Amsterdam, Netherlands

Conference Dates : February 12-13, 2018
